

How can we make Mbita Town orderly, clean and attractive to residents and visitors? How do people get knowledgeable and engaged about the environment and their role in protecting it?

This Quick Win is an important step towards Mbita town's vision so that all - women, men and children – can enjoy a safe and healthy environment.

The focus is on proper solid waste management, primarily targeting central Mbita and the market area. The project includes:

- Setting up waste bins and a proper waste collection system
- Promoting waste reduction and recycling, composting market (organic) waste, and creating business opportunities (from waste to wealth)
- Training key stakeholders on waste management

- Public awareness activities on waste and environment, involving children and youth
- Town clean-up days engaging community members

The training targets various stakeholders from county departments but also schools, boda boda riders and beach management units. Fishermen as well as the general public are currently suffering from littered beaches and polluted fishing waters.

Through knowledge and cooperation, Mbita Town can again be clean and attractive for business development and its waste used for livelihood opportunities.

## Mbita: An orderly, scenic and vibrant lake town for sustainable growth
